Quick and Easy Email Verification through Multiple Checks

Verifying the existence and validity of email addresses should be thorough and accurate.

Checking the validity of thousands of email addresses at once can be challenging. Even if every email address follows the correct format, there's no guarantee that it exists and can receive messages. Manual verification entails rigorous tests and is time-consuming. With the right email verification service, businesses can quickly and accurately validate email addresses and clean up their mailing lists.

Get access to specialized Internet intelligence sources. Employ a top-notch email verification service.

Our email verification service has prevented more than 18 million bounced emails, helping businesses communicate with the right people and reach their marketing goals. Our products have jointly verified 301+ million emails and actively monitor more than 2,000 disposable email service providers. To date, we have tens of thousands of disposable email domains in our repository (download a database sample here). Our email verification data is available in well-parsed and normalized formats accessible through real-time APIs and web-based lookup tools with bulk functionality. Test our email verification service or contact us for more information.
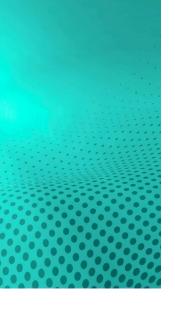

18M+ bouncebacks prevented	**301M+** email addresses verified	**2,000+** disposable email service providers monitored	**136,000+** disposable email domains

Practical Usage

Validate the existence and accuracy of email addresses to:

- Lessen the number of low-quality customers and leads

- Improve email marketing campaign results by reducing your bounce rate

- Prevent spam and other potentially dangerous messages from disposable email addresses

What Checks Are Included?

Our email verification service runs comprehensive validation checks on any given email address. See the table below for an overview of the tests we perform.

Type of Validation	Description
Syntax	Validates if the email address follows the standard format prescribed by the Internet Engineering Task Force (IETF)
Disposable email	Checks if the email address was created using a disposable email address provider
Mailbox existence	Performs email-emulation techniques to test if the email address exists and can receive messages via the Simple Mail Transfer Protocol (SMTP)
Email address type	Examines if the email address is free and generic or linked to a business account
Mail exchanger (MX) server existence	Ensures that the email domains are available by checking for the existence of DNS MX records
Catch-all email address	Verifies if the email address receives messages for more than one recipient

What Email Data Delivery Models Do You Provide?

Delivery Model	Update Frequency
Email Verification API	Daily
Email Verification Lookup	Daily
Bulk API and Lookup	Daily
Disposable Email Domain Database	Daily

About Us

WhoisXML API aggregates and delivers comprehensive domain, IP, DNS, and subdomain data repositories. We have more than 52,000 satisfied customers from various sectors and industries, such as cybersecurity, marketing, law enforcement, e-commerce, financial services, and more. Visit **whoisxmlapi.com** or contact us at **sales@whoisxmlapi.com** for more information about our products and capabilities.
